	SAINT JOHNS COLLEGE INC	We will perform a total of four soil borings on the proposed site. The borings will be advanced to a depth of 80 feet below existing site grades, and will be located within the bounds of the private property. The borings will be drilled utilizing 4.25-inch hollow stem, continuous flight augers and/or mud rotary drilling. The borings will be performed utilizing an ATV-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings/auger probes will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole/auger probe abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole/auger probe.

ECS MID-ATLANTIC, LLC	Saint Johns College INC	We will perform a total of two soil borings on the proposed site. The borings will be advanced to a depth of 30 feet below existing site grades, and will be located within the bounds of the private property. The borings will be drilled utilizing 4.25-inch hollow stem, continuous flight augers and/or mud rotary drilling. The borings will be performed utilizing an ATV-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings/auger probes will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole/auger probe abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole/auger probe.
STEPHEN PATT ECS CAPITOL SERVICES, PLLC	Ms. Ann Schiff Westminster Ingleside Communities & Foundation	Perform a total of 13 geotechnical borings at the noted address, advanced to depths ranging from 50 to 75 feet below the existing ground surface unless auger refusal causes them to be terminated at a more shallow depth. Borings will be performed utilizing a truck or track mounted drill rig utilizing 3.25 inch hallow stem augers which will create an approximate 6 inch hole. Should auger refusal be encountered, 6 borings will be advanced past auger refusal using standard rock coring techniques and will be advanced an additional 5 to 15 feet past auger refusal. Two of the borings will then be converted into temporary groundwater monitoring wells using 1.25 inch PVC. Upon completion of drilling activities, the borings will be back-filled in accordance with the approved DDOE work plan.
ECS CAPITOL SERVICES, PLLC	District of Columbia Public Schools c/o Hartman-Cox Architects	We will perform eight soil brings on the proposed site. The soil borings will each be advanced to a depth of 50 feet. Additionally, four soil borings and four infiltration auger probes will be performed on the proposed site and will be advanced to depths of 20 feet and 15 feet, respectively. The borings/auger probes will be located within the bounds of the property. The borings/auger probes will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The borings/auger probes will be performed utilizing an ATV and/or Truck-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings/auger probes will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole/auger probe abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole/auger probe.

RPS, INC.	Srours Florida Avenue, LLC.	Mobilize drill rig to advance up to 12 soil borings and construct monitoring wells in 3 of the borings. The boirngs and monitoring wells diameter is eight inches by 30 feet depth. In order to assess the soil and groundwater conditions based on data provided in previous investigations, and as directed by DDOE, Apex proposes to conduct a subsurface investigation using direct-push drilling technology -i.e. Geoprobe-. Apex will utilize a truck or track mount direct push rig to collect soil samples continuously from the ground surface to a proposed final depth of approximately 30 feet bgs. Soil samples will be collected continuously in a 48- or 60-inch, stainless steel, core sampler. Within the core sampler is an acetate liner in which each soil sample is containerized for inspection and sample collection when brought to the surface. Apex will field screen all soil samples for volatile organic compounds -VOCs- using a calibrated photo-ionization detector -PID-. Upon drilling to the appropriate depth, permanent groundwater monitoring wells will be installed in three of the soil borings. The wells will be constructed using two-inch Schedule 40 polyvinyl chloride -PVC- well screen and casing. The annular space around the well screen will be backfilled with filter sand that extends from the base of the well to two feet above the screen. Above the filter sand, a minimum two-foot bentonite seal will be installed. The remaining annular space around the well casing will be grouted to the ground surface, preventing surface infiltration. Flush mount well covers with locking well caps will be installed at the ground surface. As per site plan, work plans report, DDOE Construction Application ans Schematic Form. All wok will be conducted under DDOE regulation.

ECS MID-ATLANTIC, LLC	St. Matthew's Evangelical Lutheran Church Senior Trustee - c/o J	We will perform a total of five soil borings on the proposed site. The borings will be advanced to a depth of 60 feet below existing site grades, and will be located within the bounds of the private property. The borings will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The borings will be performed utilizing an ATV-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole.

GEOCAPITOL ENGINEERING LLC	1244 South Capitol Residential, LLC	We propose drilling three, six-inch diameter geotechnical test borings using the hollow stem auger method to evaluate the subsurface conditions. The proposed test boring depths will be 80 feet below the existing ground surface. Drilling equipment will be decontaminated between each hole to avoid cross contamination throughout the site. Upon completion, the geotechnical test borings will be backfilled with grout to the existing ground surface within 24-hours. The borehole will be tremie-grouted in one continuous operation with a positive displacement pump using a bentonite slurry mix from the bottom of the borehole upward. Drilling spoils including soils and water from the test borings will be containerized in 55-gallon drums to be removed for disposal after chemical laboratory results of the spoils have been received and reviewed. Spoils will be disposed of in accordance with Federal and District laws and regulations.
