| 2/11/2016 | SB1600105 | 2 I ST SE | We will perform a total of four soil borings on the site. Each of the borings will be advanced to a depth of 75 feet below existing site grades, and will be located within the bounds of the private property. The borings will be drilled utilizing 4.25-inch hollow stem, continuous flight augers. The borings will be performed utilizing a Truck-mounted drill rig and will generate approximately 6-inch annulus. Once the confining clay layer is encountered during sampling, 4-inch steel casing will be installed to a depth of at least 10 feet into the clay layer. After geotechnical exploration is completed, the borings will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole. | Building | Construction | Miscellaneous | Soil Boring | Permit Issued | 36.30 | 0695W 0021 | 6 | 6D | C-3-C | ECS MID-ATLANTI C/O MICHAEL VENEZIA | McDonalds Corporation c/o Steve Etminani w/ RCP Development | |
