9/19/2016	SB1600364	1761 N ST NW, Washington, DC 20036	We will perform a total of 1 boring on the proposed site. The boring will be advanced to a depth of 40 feet below the existing site grades. The boring will be located within the bounds of private property. The boring will be drilled utilizing 3.25-inch hollow-stem, continuous flight augers. The boring will be performed utilizing a truck-mounted drill rig and will generate an approximate 6-inch annulus. After drilling is complete the boring will be backfilled in accordance with DOE requirements with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. 9/26/2016	B1613461	1805 2ND ST NW, Washington, DC 20001	This is a revision to Permit B1604669. We are seeking a permit to reconstruct the pre-existing deck, which would be in line with the other row-houses to our left and right. The previous owner noted that the original deck collapsed following an earthquake. He didn't have money to replace it, so instead he himself built a temporary structure - landing and steps - so he could exit the kitchen to the backyard. The survey that was submitted reflects that temporary structure. In accordance with Section 203.2, we would like to receive a permit to rebuild the original deck. 9/6/2016	SB1600362	528 H ST NE, Washington, DC 20002	One exploratory boring will be advanced to a depth of 25 feet. No wells are being installed and boreholes will be backfilled with a bentonite/water mixture, 2lb bentonite per 1 gallon water, immediately after the boring is completed. Spoils will be sealed in barrels and bulk samples will be collected and sent to a laboratory for environmental classification. Once the results are available, the drums will be hauled off site to a proper disposal facility. Two test pits will be installed, with approximate measurements of 3 feet wide, 3 feet long and approximately 4 feet in depth. Following the excavation of the test pits, PSI will use a hand auger and dynamic cone penetrometer to sample and test the soil below the bottom of each test pit up to 10 feet or refusal, whichever is shallower. Upon completion, PSI will backfill the test pits using compaction and will repair the slab using concrete.
