6/9/2016	SB1600219	6825 GEORGIA AVE NW, Washington, DC 20012	Propose to furnish and install five gravel packed wells. The wells will be installed by advancing a 8.25 I.D. hollow stem auger from existing grade to a depth of 30 feet or refusal. All drill cuttings an investigation derived wastes from potentially contaminated sites or known contaminated sites shall be placed in a covered container and laboratory tested for offsite disposal by the contractor. At depth, a 5 inch SCH 40 PVC flush joint threaded well assembly with 20 feet of .020 slotted screen will be concentrically set into the borehole and select filter, placed into the borehole to a level 5 feet above the screen. A 3 foot hydrated bentonite pellet seal will be placed above the stone. Into each well will be installed a 1 HP turbine submersible pump with discharge riser, power cord, and lift cable to the surface. At the well head, a throttle valve and check valve will be located on the effluent line. Effluent from each well will be directed through a common manifold to a baffled settling tank and then discharged to the approved discharge location. 6/13/2016	SB1600265	1341 K ST SE, Washington, DC 20003	We will perform a total of 1 soil boring on the proposed site to a depth of 45 feet below existing grades. The boring will be located within the bounds of the private property. The boring will be drilled utilizing 4.25 hollow stem, continuous flight augers and/or mud rotary drilling. The boring will be performed utilizing a truck-mounted drill rig and will generate an approximate 6 inch annulus. After geotechnical exploration is completed, the borings/auger probes will be backfilled with bentonite slurry, which has a consistency of two pounds of bentonite powder to one gallon of water. Borehole/auger probe abandonment will be performed by tremie-grouting via a positive displacement pump from the bottom of the borehole/auger probe. 6/14/2016	SB1600266	1000 HALF ST SE, Washington, DC 20003	We will perform a total of 1 soil boring on the proposed site to a depth of 75 feet below existing grades. The boring will be located within the bounds of the private property. The boring will be drilled utilizing 4.25 hollow stem, continuous flight augers and/or mud rotary drilling. The boring will be performed utilizing a truck-mounted drill rig and will generate an approximate 6 inch annulus. After geotechnical exploration is completed, the boring will be backfilled with bentonite slurry, which has a consistency of two pounds of bentonite powder to one gallon of water. Borehole abandonment will be performed by tremie-grouting via a positive displacement pump from the bottom of the borehole.
