The boring will be drilled using 3.25-inch continuous flight augers. The boring will extend to a maximum depth of 30 feet below current site grades. The boring will be drilled using a truck- or ATV-mounted drill rig. We anticipate that the maximum annular diameter of the hole from the field exploration including the auger flights will be about 6-inches. The soil sampling interval will be every 2.5 feet within the upper 10 feet of the boring, followed by every 5 feet to the maximum depth explored. The samples will be containerized in glass jars for geotechnical classification and laboratory testing. To prevent contamination of the boring between soil strata, the drilling rods will be decontaminated using a steam cleaner or an Alconox solution prior to commencing drilling of each boring.
